NEW SMELTER IS TO BE UP TO DATE

International Plant Will Be Most Modern and Best Ever Installed.

TOOELE CITY WILL REAP BIG HARVEST

Company Will Not Attempt Any New Townsite Schemes Near Smelter.

We are going to build the most modern and the best smelting plant over installed anywhere, and you might say that the work of construction already is well under way, " said E. P. Mathewson, one of the best known smelting experts in the west, who will have the executive charge of the new Tooele County plant being installed by the International Smelting and Refinthe International Smelling and Refining company, the organization perfected Monday in New York to enter the competitive smelting field of this country and Mexico. Mr. Mathewson came down to Sali Lake from Butte Monday norning, and he spent Monday at the site of the new plant. When seen by the Tribune Thesday morning Mr. Mathewson willingly consented to give what facts he could about the new enterprise.

terprise.

'The first thing on our bands, he said. 'is to complete the railroad fine of the Toocle Valley company. This line will be sayen miles in length, and will connect the smelter with the Salt will connect the smotter with the Satt Leke Route's tracks at Toocle City. We have a franchise from this city to lay our tracks through the main street, and I wish to impress upon you that the new company is going to do every thing in its power to build up Toocle.

City.

"While out there Monday, I assured the citizens that we will not start of any new townsite schemes as all, but will do all possible towards bringing to Fooele City the prominence it is entitled to by reason of the installation of the position. Ophir Mexican Gould & Curry Consolidated Virginia Savage Hale & Norcross Yellow Jacket Betcher Confidence

titled to by reason of the installation of our plant.

"We need the railroad completed before we can get in the component for the new smelter, and our railroad ties are now on the ground. We have selected the plane to set the plane, and we have a corps of draftsmen at work now on the plans. There is two cod of snow now covering the site, but that will not retard our efforts. The company is going to pay high wages to its men, and we are going to put into being the most modern smelter in the country."

Secretary Dogerty, of the railroad company, accompanied Mr. Mathewson to Salt Lake, and will have charge of the offices of the company for Utah. Mr. Mathewson left on the noon train for the porth

Foreign Visible Copper Supply.

UTAH WAS FOURTH

STATE IN THE LIST

The production of copper in the United States in 1907, according to reports returned by the smelters of the country to the United States Georgical Sarvey, amounted to 868,996,491 pounds. The production in 1906, compiled on the same basis, was 917,805 682 pounds, and that of 1905 was \$88,784 267 pounds. From the record production of 1906 the output of 1907 shows a decrease of 48,-809,191 pounds, of 5.3 per cent. This is the largest actual Jerrease ever recorded, and is the largest relative decrease since 1886, when the percentage of decrease was 5.5, in 1907, for the first time since 1901, the production was smaller than that of the preceding year, and for the first time since 1872 the production was smaller than for the second preceding year. The smelter output chosen by the

and smelter output chosen by the Survey as representative of the copper output of the country is made up of the production of blister copper and of furnace refined or so-called "ingo copper" of Michigan plus the Michigan copper cast into anodes for electrolysis. It thus consists of the final product of the distinctly smelting contraines.

copper of Michigan plus the Michigan copper cast into anodes for electrolysis. It thus consists of the final product of the distinctly smelting operations and does not include the product of any additional distinctly refining process. The figures of smelter production for 1907 are based on direct returns made confidentially to the Geological Survey by all but one of the known smelting companies that bandled United States ores, concentrates, or mattes in 1997. The quantity of copper given as the output of the mines of the United States in 1907, based on reports collected by field agents of the Geological Survey from all mining companies in the country which produced copper during the year, was \$47,151,615 pounds, a quantity 2.5 per cant less than the product of the smelters for the same period. By far the greater portion of the mines output is treated directly in smelters owned by or having some connection with the mining companies, and this large part of the mine production. But many of the production. But many of the production. But many of the production the smelter production. But many of the production at the reduction works in that period. In a State like Montana, therefore, operation of the smelters at full conscity for a few days after the mines had begun to reduce shipments would account for a distinct excess in smaller routput over that reported from the mines are paid for the mines and smelter production had once been decided on the mines were able to execute the plan more promptly than the smelters—is responsible for the greater part of the difference between mine and smelter production were conducted at practically the same rate, returns from the two sources were in very close correspondence, the mine output being only 0.9 per cent less than the production of the smelters is the fact that the smelters recover more copper than the mines are paid for. The difference in favor of the smelter figures is the fact that the smelters recover more copper than the mines are paid for. The copper than the mines are paid for. The difference on this account is smaller than that due to other causes, but it is especially important in States like Colorado, where the greater part of the production is from custom ores generally low in gener

Production by States.

Smelter Returns

Copper was produced in 1907 in 21 States and Territories. The contribu-tion of each to the total production for the year is shown in the following

In a report on the production of copper in 1907, which has just been published by the United States Geologies! Survey as an advance chapter from "Mineral Resources of the United States, Calendar Year 1907," L. c. Graton, of the Survey, presents a detailed discussion of the condition of the industry for that year for the country as a whole and for individual States. Copies of this report may be obtained by applying to the Director of the Survey, Washington D. C. A summary of the copper production, also prepared by Mr. Graton, was issued by the Survey early in the present summer.

President Phelps Dodge.

has an interest in the district just the same, and believes there is no more logical center of opportunity in the Sagebrush state. He was the owner of the Essex property, adjoining the famous old Tulula mine, once one of the most noted producers of rich rock in Nevada in the old Dunglen days. On the Essex on the 100-foot level, Mr. Sullivan opened up a body of ore ranging from two to two and a half feet in width, for 300 feet along its strike, the ore averaging over \$10 a ton in gold and silver. The interests that intend to install a custom mill in the district ore averaging over \$10 a ton in gold and silver. The interests that intend to install a custom mill in the district have taken over the Essex property, and no doubt will bring its ores among the first to the new plant when the same is installed.

As an evidence that the district has an extensive mineralization, it may be mentioned that the Essex property is two and a half miles west of the famous Black Hole mine of E. S. Chafey and as accisates. But no greater evidence of this wide mineralization need be given than to mention that the camponee was extensively operated to fine advantage. Barber canyon is a section 1.75 15 27 2.473 24 5.00 once was extensively operated to fine advantage. Barber canyon is a section near Cantey that Mr. Sullivan has confinence in, and a number of Sau Francisco capitalists are installing a mill to treat the ores being added to daily in their proposition. Mr. Sullivan emphasizes the great good Mr. Chafey has done for the camp and every one in it, he being ready at all times to lend a heiping band, and whose purse has been open to all. 1.475 1.50 1,523 4.40

NEW CAMP OF CHAFEY

Ore Output Greater Than Any

Nevada Camp at Its

Early Stage.

"Chafey is a camp of demonstrated merit, although the world has not given

and can say positively that there never

was a district in the state at a corresponding age that has done more in an

ore production way, and all you need

do is to take the records for it. There

is not a greater amount of ore on the

has been attained there you flud the

ores continuous," said F. E. Sullivan

on Tuesday, one of the best known min-

on Tuesday, one of the best known mining men of the Chafey district, and who
is en route to Park City, his former
home, to spend the Christmas season
with his mother.

Mr. Sullivan states that he has nothing to sell in Chafey, having turned his
properties there some time ago; but he
has an interest in the district just the
same, and believes there is no more log-If the Nevada Douglas Copper company of Yerington had developed its magnificent body of copper sulphide ore on the 550-foot level for a sotal distance of 600 feet, and then found that the dimensions of the same had been established, it would have the consulation of knowing that it has within its lines one of the most wonderful bodies of red metal resources in the country, for the average width of the ore is fifty feet, and its average value is 6.5 per

feet, and its average value is 6.5 per cent copper. But after the management had actually drifted in ore on the 550-foot level for 600 feet, it was found that the south breast still continues to be ore, and that it is entirely too carly new to even form any idea as to the length of the resource.

General Manager W. C. Orem returned Monday from a visit to this property at Yerington, and to The Tribune states that the south drift still shows typical sulphide ores, although this south face is just 600 feet distant from the face of the north drift. The assay values of the face in the touth drift while Mr. Orem was at the mine ran daily anywhere from 6 to 10 per cent, and from all the conditions and lessons learned, this great body of ore will still continue to extend southward indefinitely. indefinitely.

will still continue to extend southward indefinitely.

"As far as we know," said Mr. Orem, "the point where we are now working is in ore fifty feet in width or more, for the extreme south cross-cut has been driven through ove for over twenty feet, and neither wall has made its appearance yet. Our developments have become an old story, and it is not a very easy matter to pick out anything new about the Ludwig group of our possessions. But the mine never leoked better, and we never had so much of a definite character on which to build our hopes as right now. We are working also in ore on the 650-foot level."

A. J. Orem of Beston is now in Salt.

A. J. Orem of Boston is now in Sa't Lake City, and will remain during the

Boston Copper Market.

TINTIC SMELTER IS CALLED BIG SUCCE

"I believe the time is here when must take off our hats to 'Uncle' II Knight." said a well-known minengineer Tuesday on returning from Tintic district. "Mr Knight has hup against some pretty severe critic relative to the Knight smelter in tic, but be it understood that he knows the was doing, and has bround into actual being a very successmelting plant, one whose present formances are on a par with those any first-class smelter in the welland.

any first-class smelter in the walland.

"We also were inclined to critical him when he stopped his ore shipmes several months ago to the smeltone the United States company. We though the United States company. We though the States company. We though the should continue to ship in order keep up the large dividend rate, ceased these shipments because he certain he could make a greater amount of profits by sending the rock topown plant, even though he would be to wait for his suelter to be whip into proper shape before shipmed could be made. The Colorado is sending to this plant 150 tons of begrade silver-lead ore daily, and it not be many days until the Colorships 200 tons of this rock a day my notion, this means better divide from the first of the year than the cember distribution. "Uncle" Johnows what he is about, and all crist due him and his judgment for way his affairs are now rounded of ay his affairs are now rounded of
